Assignment–2: Reconnaissance and Footprinting of NITK

Assignment–2: Reconnaissance and Footprinting of NITK

Objective

Conduct an reconnaissance assessment on National Institute of Technology Karnataka using tools such as Google Dorking, Shodan, WHOIS, DNS enumeration, and other passive information-gathering techniques.

Tasks

1. Website Enumeration

- Identify and list all publicly accessible websites hosted under the domain `nitk.ac.in`.
- Determine the total number of active websites associated with NITK.

2. IP Address Identification

- Find all public IP addresses owned or used by NITK.
- Identify the corresponding IP ranges and Autonomous System Numbers (ASN), if available.

3. Subdomain Enumeration

- Discover all subdomains associated with `nitk.ac.in`.
- Categorize the subdomains based on their purpose (academic, administration, research, student portals, mail servers, etc.).

4. Service Enumeration

- Identify all services running on each discovered IP address.
- Determine open ports, protocols, and service versions using tools such as Shodan.

5. Vulnerability Assessment

- Identify known vulnerabilities associated with the discovered services and open ports.
- Map vulnerabilities to CVEs (Common Vulnerabilities and Exposures), if applicable.
- Assess the severity of vulnerabilities using CVSS scores.

6. Technology Stack Identification

- Identify the web technologies used by NITK websites (e.g., Apache, Nginx, PHP, WordPress, Drupal, IIS).
- Determine the operating systems and frameworks used by the servers.

7. Search Engine Exposure

- Use Google Dorking techniques to identify:
 - Exposed login portals
 - Publicly indexed documents (PDF, DOCX, XLS)
